

Citizen Science

Public participation in scientific research

Data collected by volunteers is essential

Citizen Science

Reclaiming green places since 1959

Citizen Science provides opportunities for everyone

Connecting people with nature

Developing knowledge and skills

Communities working together to understand
and improve the local environment

Scotland Counts: increasing participation in
Citizen Science at a local community level

Mapping Invasive Non Native Species on Corstorphine Hill

Citizen science – an SNH perspective

For nature and people

- **Better outcomes for nature based on improved evidence and data**
- **More involvement by more people in enjoying the outdoors and learning about the natural heritage**

Voluntary records

- **Species distribution**
- **The status of wild populations**
- **The condition of protected sites and species**

Our partners play a critical role

- Building and nurturing enthusiasm and fun
- Recruiting and training the next generation
- Managing surveys

Scottish Natural Heritage

>50 Schemes and societies now on iSpot

- Amateur Entomologists' Society
- Bedfordshire Moth Group
- Bees, Wasps and Ants Recording Society
- Berkshire Moth Group
- Biological Recording In Scotland
- Biological Records Centre
- Botanical Society of the British Isles
- Bristol Regional Environmental Records Centre
- British Bryological Society
- British Dragonfly Society
- British Dragonfly Society - Sussex Group
- British Entomological and Natural History
- British Lichen Society
- British Mycological Society
- British Plant Gall Society
- British Pteridological Society
- British Trust for Ornithology
- BTO Garden BirdWatch
- Cornwall Bird-Watching and Preservation
- Dipterists Forum
- Friends of Childwall Woods and Fields
- Glamorgan Moth Recording
- Hampshire Biodiversity Info
- Highland Biological Recording
- Holt Hall Field Studies Centre
- Hoverfly Recording Scheme
- Isle of Wight Biodiversity Partnership
- Isle of Wight Natural History Society
- Leaf Beetle Recording Scheme
- London Natural History Society
- The Mammal Society
- The Marine Biological Association
- Merseyside BioBank
- National Museum Wales
- Natural History Museum
- Natural Shropshire & Shropshire Biodiversity Partnership
- New Flora of the Isle of Man
- Norfolk and Norwich Naturalists' Society
- Oxford University Museum of Natural History
- Porcupine Marine Natural History Society
- rECOrd - the Biological Records Centre for the Cheshire region
- Royal Botanic Gardens, Kew
- RSPB - Royal Society for the Protection of Birds
- Scottish Fungi
- Shropshire Wildlife Trust
- Society of Biology
- South East Wales Biodiversity Records Centre
- Southampton Natural History Society
- Tachinid Recording Scheme
- UK Ladybird Survey
- The Vincent Wildlife Trust
- Wild Flower Society
- The Wildlife Trust of South and West Wales
- Wiltshire & Swindon Biological Records Centre
- Yorkshire Naturalists' Union

Challenges

- **Recruiting, training, skills**
- **Broadening involvement**
- **Meeting our data needs**
- **Managing data**

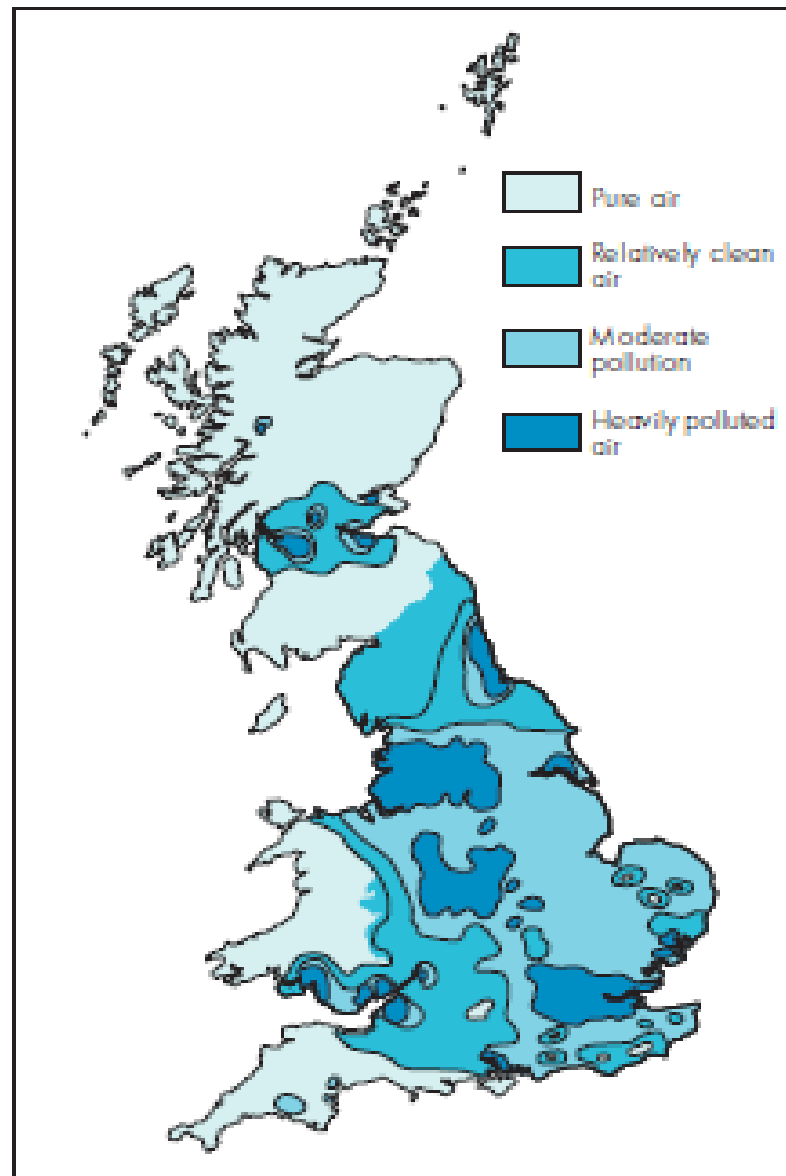

What's new about citizen science?

- Recognising and valuing the public contribution**
- Encouraging mass involvement**
- Involving young people**
- Developing and employing new technologies including mobile devices**
- Monitoring the physical environment**

Mucky Air Map

A field guide to estimating nitrogen air quality using lichens

- **A method for determining concentrations of gaseous nitrogen pollution**
- **Uses epiphytic N-sensitive and N-tolerant lichens growing on oak and birch trees**
- **SNH aims to use in SCM and monitoring the condition of woodland habitats**
- **Can be used by non-lichenologists**

Scotland's Environment Web - public engagement and citizen science

- Introduction to Scotland's Environment Web (SEWeb) and public engagement
- How SEWeb could be used to engage the public
- SEWeb, citizen science and air quality monitoring

www.environment.scotland.gov.uk

Scotland's Environment Web

'The gateway to everything you want to know about Scotland's environment'

- Provides a single view of Scotland's environment
- Demonstrates shared service approach
- Provides a forum for debate and engagement
- IS infrastructure to present data and information

SEWeb Life + project objectives

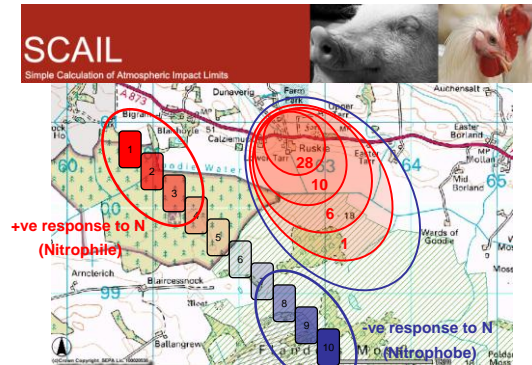

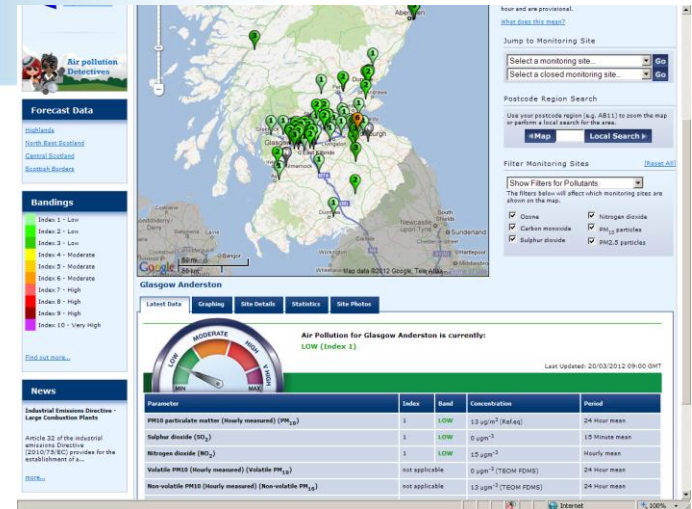

- an inclusive partnership programme bringing together the key data providers and data users
- create an Shared Environmental Information System
- prioritising environmental problems
- **promote the involvement of the public in the protection of the environment**

SEWeb - Air 'daughter website' ?

Opportunities to:

- bring together information on single site
- provide gateway to relevant sites
- draw on different data sets - enhanced data utilisation
- expand data currently held
 - LA diffusion tubes
 - Emergency response – Volcanic eruptions
 - Environmental monitoring... etc

Public Engagement

Objective - use SEWeb as a **focal point to engage** the public in the protection of the environment through:

- **access** to information
- **understanding**
- **promoting environmental monitoring, debate and action**

Public Monitoring or 'citizen science'

SEWeb roles

- **gateway**
- **platform** for data input, data display and data use;
- **guidance** provision.
- identify **gaps**

SEWeb and citizen science – gateway and guidance

- Register
- Toolkit
 - Good practice
 - IT tools for existing and new projects
 - Teachers guide
- Sharing project practice and matching up volunteers
- Citizen science and agency data

SEWeb and citizen science – filling gaps

- Invasive Non Native Species (data entry)
- **Local outdoor air quality**
-?
